Orthoptic Department

Atropine Penalisation

Administer Atropine drops to _____

Atropine Eye Drops

Are used as an alternative treatment for amblyopia (reduced vision in one eye). They paralyse the focusing muscles of the eye, and blur the vision.

Administration

Drops are usually put in once a day to one eye (this will be discussed and written on the front of this leaflet by your Orthoptist). The idea is to blur the vision in your child's "good eye" so that they use their "weak eye". If your child has a squint, you may notice their squint swap to their "good eye".

After putting the drops in, wipe the excess off with a tissue, to ensure this cannot be swallowed.

The pupil will enlarge, in some cases your child may be sensitive to bright light.

If you forget to administer the drops put them in as soon as you remember.

If you have difficulty instilling the Atropine drops you may wish to try when your child is asleep. Please do not choose to do this the first time just in case your child may suffer any side effects.

compassionate care

Side Effects

Atropine eye drops are usually well tolerated, but occasionally we see side effects such as:

- Feverishness
- Skin Rash
- Hallucinations

Please ensure you read the information leaflet included in the box with your eye drops.

If your child suffers any unwanted side effects please stop using your drops and contact the eye clinic on 01422 222091 or the A & E department.

Administering the Drops

Please make sure your child's mouth is protected to make sure any excess does not spill into the mouth. The eye drops are poisonous if swallowed.

Wash you hands

Please ensure you wash your hands before and after instilling the Atropine drops into your child's eyes. Do not rub your own eyes.

Storage

Please ensure you keep the Atropine eye drops upright, below 25ºC in a safe and dry place away from strong light.

It is essential that you keep them well out of reach from any child, as they are poisonous if swallowed. If this should occur go to your nearest A & E department.

Prescriptions

Prescriptions for Atropine eye drops will be obtained from the Eye Clinic and can be picked up from the hospital pharmacy following your Orthoptic appointment.

Expiry Date

Atropine eye drops expire 28 days after opening them. Please throw them away carefully and safely.

Appointments

It is important that we see your child in the Orthoptic Clinic on a regular basis, (usually every 2 – 4 weeks depending on their age).

Cancelling your Appointment

If you need to cancel your appointment it is essential that you contact the Orthoptic Department (telephone number is below to rearrange). Please inform them you are on Atropine drop treatment and must be seen within 5 days. This is to ensure we personally re-arrange your child's appointment. It is essential that you attend regular Orthoptic appointments if your child is on this form of treatment. If not your treatment plan may be reviewed.
